Many contemporary issues in educational psychology become clearer when set against the perspective of their historical antecedents. Originally published in 1969, this book provides a survey of the most important ideas and experiments in educational psychology at the time, showing how they have helped to shape our understanding of the factors that influence child life and growth. Dr Evans discusses the subject under four broad headings: Child Development; Theories of Personality Formation; The Psychology of Learning; and Mental Testing and Measurement. The book provided a valuable introduction to educational psychology for education students at the time, and will now be of historical interest to those involved in educational psychology.

Developmental and Educational Psychology for Teachers brings together a range of evidence drawn from psychology to answer a number of critical educational questions, from basic questions of readiness – for example, when is a child ready for school, through to more complex matters, such as how does a teacher understand and promote good peer relationships in their classroom? The answers to these and other questions discussed draw here on the interplay between a teachers' craft expertise and their knowledge of evidence and theory from developmental and educational psychology. Presenting a range of classic theories and contemporary research to help readers understand what the key issues are for teachers and other professionals, this book aides informed educational decisions in situations such as: inclusion, ability grouping, sex differences, developing creativity, home and peer influences on learning, and developing effective learners. Teachers in early years, primary and secondary settings are routinely faced with questions regarding the development of children. This not only relates to the planning and delivery of lessons, but also to the mental and physical wellbeing of the children and adolescents that they teach. The pedagogical features of this book are accessible and clearly presented, including focus questions that direct the reader's attention to key issues, activity posts that point the reader to meaningful and relevant research and show the practical applications of material covered, and extension material that gives depth to many of the topics covered. This book aims to inform the practice of both in-service and trainee teachers, addressing issues that are relevant to their practice. With no other detailed and accessible text presenting this evidence and theory specifically for an audience of practicing and trainee teachers currently on the market, this book will

be of essential reading to practicing and trainee teachers for early years, primary and secondary education and other related educational contexts such as educational psychologists, counsellors, paediatric and child doctors and nurses.

Throughout the world, the challenges facing modern education are formidable. Although some of the challenges facing are unique to each educational jurisdiction, there are also some important commonalities that transcend jurisdictions. Irrespective of the nature of these challenges, there is an increasing focus on teacher quality – what it is and how to enhance it. To date, research tells us what expert teachers should be doing in their classrooms. This approach is based on the idea that teaching expertise is nothing more than the accumulation of specific skills and knowledge, and as teachers acquire these skills and knowledge most of our educational challenges can be overcome. This book questions this idea by asking 37 teachers who are already recognised as experts to share their classroom secrets. Importantly, the teachers come from diverse cultural contexts, including Australia, Finland, Hong Kong and the US, and they share: how they became expert teachers; their expectations for every student when they enter their classroom; how they view and encourage teacher–parent partnerships; and what skills and knowledge they consider important for expert teaching. To our knowledge, this is the first book that compares and contrasts the approaches taken by expert teachers from four very different cultural groups. The book helps to demystify the work of the modern teacher – what they do and the challenges they face. If you aspire to be an expert teacher, this book provides a clear model of how to approach the process. If you are an education researcher searching for ‘impact’, this book outlines what are some of the emerging hot topics in education research. If you are involved in teacher education then this book offers some new approaches to initial teacher education. If your focus is on educational policy, this book helps make sense of the links between the classrooms of expert teachers, education research and academic achievement. Finally, this book will help parents understand how best to partner with their child’s teacher in order to enhance their learning.

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the

brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Organized around the unique theme of "What teachers need to know," Borich and Tombari present clearly organized units on Developmental Learning, Instruction and Classroom Management, Assessment, and Diverse Learners. Features include two new chapters on cognitive and constructivist strategies of teaching and learning, and over 40 "Applying your Knowledge" boxes.

The second edition of this distinctively Australian text continues to retain the hallmark features, resulting in it being the 2004 Category Winner for the 'Awards of Excellence in Educational Publishing'. This popular textbook continues to adopt a developmental focus for complex issues in teaching. As a valuable resource Educational Psychology addresses contemporary ideas in context of lifelong learning, vocational education and the dynamic use of information and communication technologies. By analysing educational psychology and the theories of development and learning this text will help you to: understand your own development and factors that have contributed to it; provide strategies to enhance the quality of your learning and motivation; guide your understanding of how learners learn and how educators can be more effective in their teaching practice; contribute to your personal philosophy of learning and teaching. If you are aspiring to become a teacher or educational psychologist this is a must have text, written by experienced and renowned practitioners with backgrounds in teaching, educational psychology and child development.

Review comment on the first edition "Wheldall asks himself and his readers what has transpired within the field of educational psychology ... and what its relevance actually is for teaching, learning and education. As such it is a 'must read' for all educational psychologists, students of educational psychology, teachers and teacher trainers." Professor Paul Kirschner, Open Universiteit, British Journal of Educational Technology What is the relevance of educational psychology in the twenty first century? In this collection of essays, leading educational psychologists reflect on the seminal developments which have been made in the field over the past twenty five years or so and assess how far we have progressed. Given a broad and personal remit to address a range of issues, the contributors review and critique a variety of topics, including: intelligence; communication; family environments; individual differences; reading; peer learning; classroom behaviour; and higher education. Providing provocative and challenging insights into the state of contemporary educational psychology, the contributors acknowledge throughout the successes and progression in the field, but with a critical edge and a challenge being thrown down to psychologists of education to make study more seriously informed and as a consequence, reformed. Now in its second edition this compelling text for students and researchers is thoroughly updated and includes four new chapters.
